TIDES	Ecology Center	2006	100		www.ecologycenter.org	PASS THROUGH?
OAKS	NEW England Aquarium	2005				To create a marine protected area around the Phoenix Islands in Kiribati using a trust/endowment that will compensate Kiribati for lost fishing revenues
OAKS	OCEANA INC	2005				To reduce bottom trawling by the EU fleet by 40 per cent
OAKS	UNIV OF BRITISH COLOMBIA	2005				To generate a single integrated database containing key information for addressing issues of marine conservation globally. The database will contain over 200,000 marine species that can be easily accessed by the public who have access to the Internet. It will include growth parameters, reproductive success, habitat, commercial value, associated trade statistics and threat status. (Over two years)
OAKS	Center for Resource Economics / Island Press	2006				To support the development and dissemination of new knowledge and multidisciplinary information tools to advance ecosystem-based approaches to ocean conservation. (Over two years)
OAKS	Environmental Defense Inc	2006				To highlight the increasing need for transparency, public participation and the necessary consideration for environment and social assessments in the international financial institutions' policies and to ensure policy implementation on the ground.
OAKS	Fondation Internationale du Banc d'Arguin	2006				To set up a representative, comprehensive and functional regional marine protected areas network in West Africa that will contribute to preserving marine biodiversity and recovery of fish stocks. (Over two years)
OAKS	New England Aquarium	2006				To continue support of the Aquarium's Marine Conservation Action Fund which provides 'rapid response' funding; as well as professional and technical assistance; for small-scale, time-sensitive, community-based programmes that address urgent, aquatic conservation problems worldwide. (Over three years)

OAKS	Pew Charitable Trusts	2006				To establish at least three large, world-class marine-protected areas over the next decade. (Over five years) To create a coalition of NGOs, and other like-minded entities who will attempt to reverse the current trend in non-sustainable deep-sea fishing practices. The campaign expects to secure a United Nations General Assembly resolution that will establish a moratorium on about 75 per cent of the high seas.
OAKS	President & Fellows of Harvard College	2006				To develop and distribute a suite of educational materials that will inform the general public in the US of the human health reliance upon the ocean environment. (Over two years)
OAKS	OCEANA INC	2007				To secure EU legislation by 2010 to achieve substantial reductions in bycatch through banning discards in the most significant discard fisheries by the EU fleet and by any vessel in EU waters. By the end of 2008, the project will, amongst its other goals, have obtained firm political commitment at EU and Member State levels to reduce fisheries discards and a clear mandate for the EU to develop legislation on this issue. (Over two years)
OAKS	UNIV OF NEW HAMPSHIRE	2007				To support the research, public outreach and capacity building needed to understand, illustrate and motivate conservation actions for the recovery of the north-western Mediterranean Sea. This will be done through analysis of historical data, focused field experiments and modelling of future recovery scenarios. (Over three years)
OAKS	OCEANA INC	2008				To achieve policy changes in Europe that will, firstly, protect essential ocean habitat from destruction by bottom trawlers (by establishing specific areas off-limits to trawling); secondly, reduce bycatch and discards, including those from indiscriminate forms of fishing such as drift-netting; and thirdly, establish protections for sharks – which have seen their populations decline drastically in recent years – from overfishing and from the increasingly common practice of “finning,” and which receive almost no protection from the EU or its member states. (Over three years)
OAKS	Pew Charitable Trusts	2008				To lay the foundations to reform the European Common Fisheries Policy (CFP), which is scheduled for review in 2012. The project seeks, among other things, to build support among key constituencies to increase public accountability on fisheries policy issues in order to increase pressure on decision makers to take more environmentally sustainable decisions; and to establish environmental sustainability as the overarching principle for the reformed CFP, without which economic and social sustainability are not attainable. (Over two years)
